

BSAU 03.2 - vandal-proof mixer, cold-hot water (T-mixer with valve)

BSAU 03 is a vandal-proof, safety, mixed water washbasin. The user can adjust the required water temperature with the help of a thermostatic valve, which is also vandal-proof. The vandal-proof spout arm is made of 2mm thick material, so it will stand up to any damage. The base plate is made of 3mm thick steel plate, which is secured with safety screws. A vandal-proof button can be used to operate the device. After the user presses the button, the water will flow out at the preset temperature. The water will start to flow when the button is pressed. The user can adjust the water temperature with the help of the thermostatic valve. BSAU 03 is made of stainless steel AISI 304, but it can also be ordered in other materials (e.g. AISI 316). We recommend WÜRTH cleaning products for cleaning and maintenance (no. 0893 121 K) for cleaning (no. 893 121 1) and maintenance.
